

Probability and Statistics in Internet Information Retrieval

ZHI-MING MA, *Inst. Appl. Math, Academy of Math and Systems Science, CAS*,

e-mail: `mazm@amt.ac.cn`

Keywords: information retrieval, Web search and mining, PageRank, Markov chain, statistical learning, coupling matrix, stochastic complement, inference of point processes

AMS keywords: Primary 68P20; Secondary 60J20, 62P30, 68Q32

In this talk I shall briefly review some of our recent joint work (in collaboration with Microsoft Research Asia) concerning Internet Information Retrieval. Our work reveals that Probability and Statistics is becoming more and more important in the area of Internet information retrieval. It reflects in turn that Internet information retrieval has been a rich source providing plenty of interesting and challenging problems in Probability and Statistics.
