# Zimmer's gap theorem

#### Theorem

(Zimmer) For all  $n \in \mathbb{N}$  and  $\alpha > 0$  there exists a constant  $\epsilon = \epsilon(n, \alpha)$  such that the following holds: if  $\Omega \subset \mathbb{C}^n$  is a bounded  $C^{2,\alpha}$ -smooth convex domain and if  $S_{\Omega}(z) \ge 1 - \epsilon$  for  $z \in \Omega \setminus K$ , with  $K \subset \Omega$  compact, then  $\Omega$  is strictly psedoconvex.

-8-

# Zimmer's gap theorem

### Theorem

(Zimmer) For all  $n \in \mathbb{N}$  and  $\alpha > 0$  there exists a constant  $\epsilon = \epsilon(n, \alpha)$  such that the following holds: if  $\Omega \subset \mathbb{C}^n$  is a bounded  $C^{2,\alpha}$ -smooth convex domain and if  $S_{\Omega}(z) \ge 1 - \epsilon$  for  $z \in \Omega \setminus K$ , with  $K \subset \Omega$  compact, then  $\Omega$  is strictly psedoconvex.

#### Theorem

(Zimmer) Let  $\Omega_1 \subset \mathbb{C}^n$  be strictly pseudoconvex, and let  $\Omega_2$  be a convex domain with  $C^{2,\alpha}$ -smooth boundary. Then if  $\Omega_1$  is biholomorphic to  $\Omega_2$  we have that  $\Omega_2$  is strictly pseudoconvex.
